Project 3 Timeline

Date	Minimal Code Deliverables	Minimal Report Deliverables
Tue, Nov 23rd 11:59 PM	Working implementation of BBA-2 and a variant, or RobustMPC and a variant	1. Implementation details of the algorithm and variant implemented. 2. Performance results for the algorithm and variant. 3. Analysis and Observations
Thu, Dec 9th, 11:59 PM	Working implementation of both algorithms, and the variants of each algorithm.	1. Implementation details of both algorithms and the variants. 2. Performance results for both algorithms and the variants. 3. Comparisons and Analysis. 4. Discussions of any open-ended explorations.

Note:
- Students must submit their implementations on GitHub by the deadline. The details regarding each submission are the same as previous exercises, and as mentioned in the handout. Students MUST COMMIT their code on GitHub REGULARLY to allow us to track progress on the project. For any consideration (e.g., in the event a student falls sick in the last week), we MUST SEE evidence that you started early, and were working consistently throughout the project.
- Students need to submit the reports on Gradescope by the deadline.
